Download podcast episodes with just a few clicks. Drag and drop support for podcast subscriptions. Create a podcast subscription list with categories and folders. Automatic update feature for a list of podcasts. Ability to delete podcasts from a list. Extension to add new podcast feeds. Super-lightweight application that doesn't eat your bandwidth. Regardless of your favorite news aggregator, this particular application does not simply make all the news accessible to you. While your favorite news reader is responsible for providing you with a list of new stories, this application focuses more on stories you have already read. Instead of going through the list of new stories one by one, Feed Reader lets you set a time interval to be informed of the new stories available. This way, you can conveniently focus on the ones that interest you the most. Create a folder for your RSS feeds The best part about Feed Reader is the ability to create custom folders for your RSS feeds. You can always create as many folders as you want, and each one will represent an RSS reader and the content within. For instance, you can create a folder for the feeds you are subscribed to on Google Reader, and another for Bloglines (if you are subscribed to that too), or for a favorite magazine from a period of time ago. Any custom folder you create can also hold your favorite RSS feeds. Simply select the news you are interested in and feed them to Feed Reader. Read through new stories whenever you wish Unlike most RSS readers, Feed Reader lets you set a specific time interval to be informed of new stories. It can be set to be either alerted by emails or by Windows System Tray messages, or both. Feed Reader can actually be set to download new stories whenever you wish, provided that your internet connection is stable. You can also choose not to download new stories right away. Access news via email A minor annoyance is that Feed Reader only downloads the news you have already read from an RSS feed, but does not automatically save them. So if you want to see new stories later, you must manually save them. In order to get rid of this annoyance, Feed Reader can automatically save all the stories you have read on a given RSS feed. You only need to select the news you want to save and configure the interval at which they are saved. Select which folders you want to monitor There are several folders you can monitor. For example, you can monitor feeds from specific people. And Feed Reader has an option
