A simple-to-use software application that facilitates a quick method for running the tools from the Windows Sysinternals Suite. Since installation is not a prerequisite, you can drop the executable file anywhere on the hard disk and just click it to run. There is also the possibility of saving WSCC - Windows System Control Center to a USB flash disk or similar storage unit, to be able to run it on any PC effortlessly and without previous installers. What's more, the Windows registry does not receive new entries, and leftovers are not kept on the HDD after removal. Quickly install software applications At initialization, the program populates a list with all identified software products that you can install, such as DiskMon, Autoruns, PageDefrag, PortMon, GoogRank, SeqDownload, or TagsReport. The interface is made from a regular window with a neatly organized structure, where you can view a list of all items and click their button to run the corresponding utility, as well as use a search function across the entire list. Plus, the tools are grouped together into categories such as Windows (e.g. File and Disk, Network, Process) and NirSoft Utilities (e.g. Internet, Desktop, System Information). Configure program settings easily As far as program settings are concerned, you can set the program to minimize to the tray, alter the default temporary folders, pick the menu and software list viewing mode, show hidden items, use proxies, include new software when checking for updates, and so on. WSCC - Windows System Control Center does not put a strain on computer performance, since it uses low CPU and RAM. It has a good response time and works well, without causing the OS to hang, crash or pop up error dialogs. We have not come across any issues throughout our evaluation. All in all, WSCC - Windows System Control Center comes packed with a rich collection of useful tools that should meet the requirements of most users. New Typographic Guide for The Digital Designer Looking for an online platform to speed up the design process? Look no further than TypoScript, the web technology that lets you create high-quality typographic websites. No more fuss! TypoScript is a user-friendly open source web development tool to create content-driven websites. It is the first step to an exciting world of online communication, commerce and interaction for designers. Want a beautiful

Windows System Control Center (WSCC) enables the user to run the Windows System tools from the Windows Sysinternals Suite. WSCC has a very simple user interface and is easy to use. WSCC – Windows System Control Center works on Windows XP, Vista, 7, 8, 8.1, 10, and Server 2003, 2008, 2012, 2013, 2016, and 2019. Features • Run Windows system tools from the Windows Sysinternals Suite • Low RAM and CPU usage • Populates list of detected software • Configure WSCC settings • Updates to program can be automatic • Readme file included Installation/Uninstallation WSCC is very easy to uninstall. Once you have downloaded the program you will need to extract the ZIP file. Once extracted you will see the following files: • Wscript.exe (Windows Scripting Host) • WSCC.exe (Windows System Control Center) • P.exe (Portable) • Readme.txt • Help.html • Install.txt • Support.txt To install the program do the following: • Double click the Wscript.exe to start the Windows Scripting Host (runs the installer) • Double click WSCC.exe to launch Windows System Control Center (launches the program) • Double click the P.exe to install the Portable version • Double click the Install.txt file to install the program • Double click the Help.html file to launch the help menu • Double click the Support.txt file to launch the support menu • Double click the Readme.txt file to launch the readme file Compatibility Windows XP and Windows 2000. Programs Installed by WSCC: FileMon: Monitors files, folders, and processes on a local or network computer DiskMon: Monitors files and folders in a local or network drive, including network drives ProcessExplorer: Displays information about running processes and controls ASPMon: Monitors ASP.NET processes on the local computer or the domain MT: Monitors NT services that are not running FileInfo: Displays information about a file or folder Regmon: Displays information about the registry ProcessExplorer: Displays information about running processes and controls TaskManager: Monitors the running tasks on the local computer or the domain WinRar: Extracts rar files from the Windows Registry Process Explorer: 1d6a3396d6
